

# Cloud Services

## Cloud Readiness Assessment

### Set Your Cloud Direction

*Successful cloud migrations are focused on the data, applications, workloads, and services that need to be delivered.*

APPLICATIONS

WORKLOADS

DATA

SERVICES

### Your Challenges:

- Improve innovation, agility, and performance with cloud
- Determine TCO and ROI for your cloud investments
- Understand your IT environment and its interdependencies
- Know which of your applications are cloud-ready

### How We Help:

- Align your business and IT goals first, not later
- Thoroughly discover and analyze your environment
- Find the perfect cloud for your needs and objectives
- Provide an actionable migration plan

### Our Approach

Knowing which cloud – and which cloud service – is exactly right for your applications and data isn't easy. Every day, our team helps customers check for compatibility, set budgets based on real-world usage, and find opportunities to modernize legacy approaches.

The iT1 Cloud Readiness Assessment will help you to:

- Build a complete report of current assets
- Report on actual resource utilization
- Map applications to the infrastructure they use
- Model costs across all major cloud providers

# Cloud Readiness Assessment

## IT1 Assessment Methodology

**Align:**  
Business and IT goals

**Assess:**  
Resource utilization, cloud-compatibility

**Recommend:**  
Detailed budgeting, best cloud fit

**Migrate**  
Modernize, actionable plan

## How it Works

Our assessment safely gathers data from your environment to determine your resource utilization at low, peak, and average points during a full business cycle. We then analyze that data and connect it to your exact needs and goals to find the cloud services and platforms that will bring you the best ROI.

- **Asset Discovery**

Capture the device type, content, and location across your estate to ensure you know where all assets "known" and "unknown" reside.

- **Data Center Workload Sizing**

Measure your workloads to size your cloud solutions.

- **Optimized Pricing Model**

Compare usage- and inventory-based pricing, examine cost differences, and recommend the best fit for your cloud migration.
