Corrections Technology for Tomorrow

YOUR COMMUNITY MATTERS

iT1's Corrections Technology Go-Kit, Powered by:

CORRECTIONS TECHNOLOGY GO-KIT

Overview:

The iT1 Go-Kit is designed to give corrections agencies, jail programs, and other justice-related educators a 14-day hands-on experience with the most advanced, secure, incarcerated person content delivery platform available.

What our Go-Kit Consists of:

- 10 Chrome devices, Tablets and Laptops, with Tablets in a ruggedized corrections-grade case
- All necessary charging connections
- iT1 Configured Cisco Meraki Firewall, with included ATT Sim Card
- Ethernet cable (If facility wants to plug the firewall into their own LAN)

Program Delivery:

The iT1 public safety team will deliver the Go-Kit and provide a hands-on training session for how to use the devices from the end user’s perspective (justice involved) and from the administrator’s perspective. Your team will be trained on how to turn on devices, log in with single sign on with provided hardware passwords, and how to navigate content, set personal goals, and take courses. iT1 will train staff on how to manage the platform, monitor usage, run reports, turn on and off content, manage users, and groups.

Duration:

- 2-hours of training and orientation on-site
- 14 days of self-managed usage of the Go-Kit
- 1-hour of debrief and pick up at the end of the 14 days

Please Note:

This is a demo-kit, provisioned and ready to go with a sampling of what we can provide, but not EVERYTHING we provide. The Go-Kit needs connectivity to an ISP/Carrier, if our ATT connectivity does not work then we will need to gain access to connectivity, either through an alternate broadband connection or your LAN via a VPN or other method.

We look forward to serving your community!
